PROFILE

I build systems that take repetitive work off people's calendars. Since 2025 I have worked directly with company owners in law, dentistry, digital marketing and retail — understanding the pain, writing a clear plan, and only then building the automation, AI assistant or integration that solves it. My focus is where AI meets the business side: what a system does to revenue, cost and hours, not what features it has.

FOCUS

AI & agents	LLM APIs, RAG, prompt design, AI support assistants, agent workflows
Automation	Python, n8n / Make, API integrations, document data extraction
Growth	Finding where revenue leaks, scoping by business impact, lead capture and routing
Data & web	pandas, scikit-learn, JavaScript, TypeScript, React, Cloudflare Workers, SQL

EXPERIENCE

AI & Automation — Freelance	2025 – Present
Self-employed · Brazil · four companies in law, dentistry, digital marketing and retail	
- Automated lead handling and purchase flows with AI for four companies. Leads that used to sit unanswered for up to two weeks are now picked up and routed automatically — the delay was costing them the enquiry, not just the time. - Built B2B websites with geolocation and third-party integrations, so enquiries arrive already sorted instead of landing in an inbox nobody owns. - Worked with owners directly rather than from a brief: understand the pain, write the plan, then build. Several engagements turned into repeat work.	

SELECTED WORK

Cover Letter Assistant	raulrodriguexz.github.io/cover-letter-api
AI tool that tailors a cover letter per company. Static front end + Cloudflare Worker + OpenAI API — no server to maintain, no key in the browser. Cuts a 30-minute task to under a minute, at effectively zero hosting cost.	
raulrodrigues.dev — portfolio as a working product	github.com/RaulRodriguexz/portfolio-3d-v2
Built from a written spec: React, React Three Fiber, Tailwind, 3D code-split from the content. 138 KB over the wire on a phone, Lighthouse 99 / 94, fully usable with WebGL off.	
Titanic — machine learning pipeline	github.com/RaulRodriguexz
Exploratory analysis, feature engineering, model comparison and validation. 0.78 on Kaggle, every decision documented.	

EDUCATION

English Language Course — SEDA College, Dublin · 2026
Software Engineering — FIAP, Brazil · on hold for the exchange
Youth Apprenticeship — CAMP SBC, Brazil · 2023–2024
Two-year vocational programme (Law 10.097): classroom training plus placement at a partner company
Secondary Education — completed, Brazil · 2025

LANGUAGES & ALSO STUDIED

Portuguese — native
English — A2, in daily study; relocating for an intensive course at SEDA College
Also studied: Java, C++, C#
